EXPERIENCE

Software Engineer Intern

Sep '24 — Apr '25

Qwipo Hyderabad, India

- Collaborated closely with project leads to design and implement robust microservices, improving application scalability, maintainability, and performance while adhering to best practices in distributed systems.
- Designed and managed private npm packages to streamline dependency management across multiple company repositories, leveraging Azure Pipelines for automated CI/CD workflows, significantly improving development efficiency and consistency.
- Spearheaded the integration of AI-powered tools like Windsurf, boosting code efficiency by 30% and reducing bug resolution time by 25%, significantly accelerating project timelines and enhancing software quality.

SKILLS

Programming Languages: C++, Python, JavaScript, TypeScript

Web Development: HTML, CSS, Bootstrap, React, NodeJS, Angular, Styled Components, Handlebars

Database Management: SQLite, Redis, Firebase, PostgreSQL

Cloud Services: Azure, AWS

Tools and Methodologies: Microservices, Swagger, Postman, Git, Power BI, RESTful, Linux, Computer Science

Containerization: Docker, Kubernetes

Interests Reading Books, Learning new Technologies

Languages English, Telugu

PROJECTS

AI-Powered Calculator [Link](#)

- AI-Powered Calculator for solving mathematical expressions by drawing them!
- Support for various problem types: expressions, equations, and graphical problems
- Technologies used: React, Vite, LaTeX, Google's Gemini AI model, FastAPI, Python, Mantine UI and Tailwind CSS.

Multiplayer Tic-Tac-Toe Game [Link](#)

- The multiplayer Tic-Tac-Toe game is built using React with Stream API for authentication.
- It also includes a chat application for player communication.
- Technologies used: React, Stream API, and Node.js.

SnapLearn [Link](#)

- Engineered an AI-powered educational platform using React, TypeScript, and Node.js that automatically generates MCQs from lecture videos, reducing content creation time by 80% while improving student engagement
- Implemented an optimized video processing pipeline with faster-whisper transcription and local LLM Mistral, achieving 5-10x faster processing speeds for large video files while maintaining 95% accuracy

Jobby App [Link](#)

- Developed a job application portal using React.js for the front end and Node.js with Express for the back end.
- Implemented user authentication with JWT.
- The technologies used include React.js and Node.js.

EDUCATION

B Tech in Information Technology, Gokaraju Rangaraju Institute of Engineering and Technology (GPA: 8.73) Nov '22 — Present
Hyderabad, India

AWARDS

Team Selected - Flipkart Grid 6.0 (Round 1)
