EXPERIENCE

Software Engineer Intern

Sep '24 — Apr '25

Qwipo Hyderabad, India

- Collaborated closely with project leads to design and implement robust microservices, improving application scalability, maintainability, and performance while adhering to best practices in distributed systems.
- Designed and managed private npm packages to streamline dependency management across company repositories, using Azure Pipelines for automated CI/CD, enhancing development efficiency and consistency.
- Spearheaded the integration of AI-powered tools like Windsurf, boosting code efficiency by 30% and reducing bug resolution time by 25%, significantly accelerating project timelines and enhancing software quality.

Full Stack Developer Intern

Jun '25 — Feb '26

Annam.AI Remote, India

- Designed and implemented a complete CI/CD pipeline using GitHub Actions, deploying the backend to Google Cloud Run and the frontend to Firebase, with support for both production and staging environments.
- Collaborated closely with project leads to integrate Sentry for error monitoring and Tailscale VPN to securely connect cloud services with locally hosted LLM models on the IIT Ropar server.

SKILLS

Programming Languages: C++, Python, JavaScript, TypeScript

Web Development: HTML, CSS, Bootstrap, React, NodeJS, Angular, Styled Components

Database Management: SQLite, Redis, Firebase, PostgreSQL

Cloud Services: Azure, AWS, GCP

Tools and Methodologies: Microservices, Swagger, Postman, Git, Power BI, RESTful, Linux, Computer Science

Containerization: Docker, Kubernetes

Interests Reading Books, Learning new Technologies

PROJECTS

PixelForge [Link](#)

- Developed an AI image generation platform where users can generate images and train custom AI models using their own datasets.
- Integrated Fal AI for image generation, model training, and implemented Razorpay with secure webhook handling.
- Technologies Used: Next.js 14, TypeScript, Node.js, Clerk, Docker and Cloudflare R2

AI-Powered Calculator [Link](#)

- AI-Powered Calculator for solving mathematical expressions by drawing them!
- Support for various problem types: expressions, equations, and graphical problems
- Technologies used: React, Vite, LaTeX, Google's Gemini AI model, FastAPI, Python, Mantine UI and Tailwind CSS.

SnapLearn [Link](#)

- Built an AI-powered educational platform that converts lecture videos into auto-generated MCQs.
- Developed a high-performance video processing pipeline using faster-whisper and a local Mistral LLM, enabling 5–10× faster transcription and question generation with ~95% accuracy.
- Technologies Used: React, Node.js, faster-whisper, Mistral LLM, FFmpeg, MongoDB.

EDUCATION

B Tech in Information Technology, Gokaraju Rangaraju Institute of Engineering and Technology

Nov '22 — Present

(GPA: 8.75)

Hyderabad, India

AWARDS

Multi-Agent Hackathon Winners

Apr '25

Bayes Labs

- Designed and implemented a custom multi-agent orchestration system coordinating NLP, diagnostic, safety, and treatment agents for an end-to-end healthcare AI pipeline

ORGANIZATIONS

Advanced Academic Center (AAC)
